

CLEVELAND MUSEUM OF NATURAL HISTORY GREEN INFRASTRUCTURE GRANT

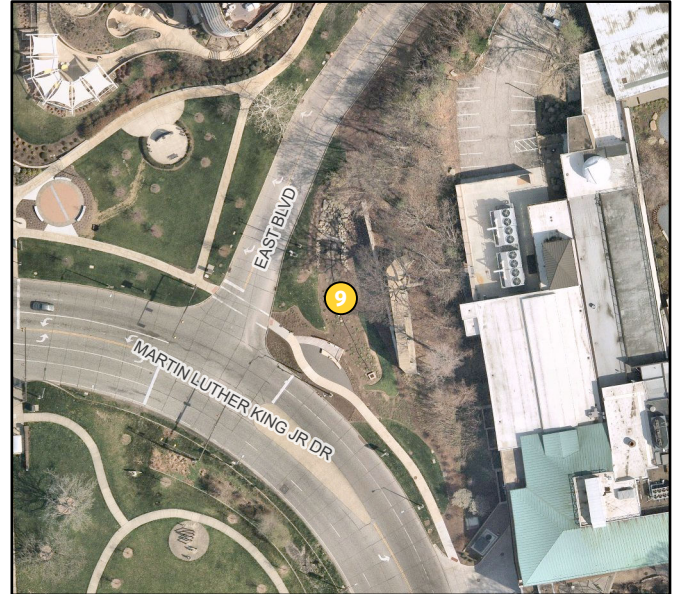

Cleveland, OH

Summary

In 2014, The Cleveland Museum of Natural History was awarded a GI Grant in the amount of \$132,550 to install an infiltration basin as part of the reinvention of their western facade.

Challenges encountered soon after construction was complete required the feature to be converted to a bioretention cell.

This highly visible entryway to University Circle collects runoff from the upslope parking garage and has a drainage area of 5.4-acres. An estimated 1.94 million gallons are removed annually from the combined sewers.
