PROPOSED ADA RAMP

PROPOSED RECREATION CONNECTION

- COGIC is carrying on the tradition of robust community involvement and renewal of the Woodland Hills area with this design project to control stormwater, create usable outdoor public spaces and improve aesthetics of the church, intersection, and neighborhood.
- Permeable pavement parking lot to replace the existing gravel parking lot, that is not well organized and does not provide safe and easy access to the building.
- Additionally, roof drainage for a portion of the building will be rerouted to the permeable paver base and distributed through a series of underdrains to further enhance the efficiency of the system.
- Underground stormwater storage chambers to accommodate additional stormwater storage and efficiencies.

Grant Awarded: \$30,000
