Level 3 Project Study Plan

2012 Big Creek Environmental Monitoring

(1) Objectives

In 2012, the Northeast Ohio Regional Sewer District (NEORSD) plans to conduct stream monitoring activities at River Mile (RM) 0.15 on Big Creek, an urbanized tributary to the Cuyahoga River. RM 0.15 is located downstream of Jennings Road on the Big Creek Main Branch and is downstream of NEORSD-owned combined sewer overflows (CSOs). NEORSD will assess stream habitat, water chemistry, and fish and benthic macroinvertebrate community health to evaluate the impact of CSOs and other environmental factors on the creek. Macroinvertebrate and water chemistry sampling at RM 0.15 is required by Ohio Environmental Protection Agency (Ohio EPA) National Pollutant Discharge Elimination System (NPDES) Permit No. 3PA00002*FD. Sampling for nutrients and chlorophyll *a* may also be conducted at RM 0.15 in order to establish baseline levels in the creek.

Stream monitoring activities will be conducted by NEORSD Level 3 Qualified Data Collectors certified by Ohio EPA in Fish Community Biology, Benthic Macroinvertebrate Biology, Chemical Water Quality, and Stream Habitat Assessments. The results obtained from these assessments will be evaluated using the Ohio EPA's Qualitative Habitat Evaluation Index (QHEI), Index of Biotic Integrity (IBI), Modified Index of Well-Being (MIwb), and Invertebrate Community Index (ICI). Water chemistry data will be compared to the Ohio Water Quality Standards (Ohio EPA, 2009b)[1] to determine attainment of applicable uses. An examination of the individual metrics that comprise the IBI and ICI will be used in conjunction with the water quality data, NEORSD Macroinvertebrate Field Sheet, and QHEI results to identify impacts to the fish and benthic macroinvertebrate communities. Results will also be compared to historic data to show temporal trends.

(2) Nonpoint/Point Sources

Point Sources	Nonpoint Sources
Combined Sewer Overflows	Urban Runoff
Sanitary Sewer Overflows	Landfill Leachate
Storm Sewer Outfalls	Spills
Home septic systems	Agriculture
Tributary streams	

[1] See appendix I for a list of all references.

A map has been provided to show point sources that may be influencing the water quality at the sample location. These sources, along with the nonpoint sources listed in the table above, may be impacting the health of the fish and benthic macroinvertebrate communities in Big Creek. Other factors that may influence ecological conditions during the study include periods of drought or precipitation.

(6) Sampling Location

The following water chemistry, habitat, electrofishing, and macroinvertebrate sample location on Big Creek will be surveyed during the 2012 field season. Benthic macroinvertebrate and water chemistry collection sites are located within the electrofishing zone, indicated by RM. GPS coordinates are recorded at the downstream end of the electrofishing zone.

Water Body	Latitude	Longitude	River Mile	Location Information	USGS HUC 8 Number - Name	Purpose
Big Creek	41.4460	-81.6865	0.15	Downstream of Jennings Road	04110002 Cuyahoga	Evaluate water chemistry and macroinvertebrates as required by Ohio EPA Permit #3PA00002*FD, and evaluate the fish community and instream habitat as supplemental data

This map was compiled by the Northeast Ohio Regional Sewer District ("District") which makes every effort to produce and publish the most current and accurate information possible. This map was created and compiled to serve the District for planning and analysis purposes. The District makes no warranties, expressed or implied, with respect to the accuracy of this map and its use for any specific purpose. The District and its employees expressly disclaim any liability that may result from the use of this map/data. For more information, please contact: Jeffrey Duke, P.E., GISP (GIS Services) 3900 Euclid Avenue, Cleveland, Ohio 44115 (216-881-6600).

The following sections are applicable to all NEORSD 2012 Project Study Plans

(3) Parameters Covered

Fish specimens will be identified to species level, weighed, counted and examined for the presence of external anomalies including DELTs (deformities, eroded fins, lesions and tumors). An Ohio EPA Fish Data Sheet (Appendix G) will be completed during each assessment. Quantitative fish sampling is expected to be conducted at all locations.

Macroinvertebrate community assemblages will be collected from each location. The Midwest Biodiversity Insitute (MBI)[1] will identify and enumerate the specimens collected from each site. All specimens will be identified to the lowest practical taxonomic level as recommended in Ohio EPA's *Biological Criteria for the Protection of Aquatic Life, Volume III* (1987b)[2]. The NEORSD Macroinvertebrate Field Sheet (Appendix A) will be completed at each site during HD sample retrieval or when qualitative sampling is conducted.

Stream habitat will be measured by scoring components of the QHEI at all locations, including the substrate, instream cover, channel morphology, riparian zone, bank erosion, pool/glide and riffle/run quality and gradient. See Appendix H for an example of the QHEI Field Sheet.

Water chemistry samples will be collected at each electrofishing and macroinvertebrate sampling site included in the study. Water chemistry samples will be analyzed by NEORSD's Analytical Services Division. Appendix B lists the parameters to be tested along with the detection limits and practical quantitation limits. Field measurements for dissolved oxygen, pH, temperature, conductivity and turbidity will also be performed. A Surface Water Condition Sampling Field Data Form will be completed at each site during each sampling event (Appendix C).

Benthic and water column chlorophyll *a* samples may be collected from stream locations. Chemical and physical water quality parameters to be measured in conjunction with the chlorophyll *a* samples include total phosphorus, dissolved reactive phosphorus, nitrate+nitrite, alkalinity, turbidity and suspended solids.

[1] The bid submitted by MBI has not yet been approved by The Northeast Ohio Regional Sewer District Board of Trustees at the time of this writing. An amended study plan will be submitted if the District is unable to enter into a contract with MBI and must contract this service with another vendor.

[2] See Appendix K for a list of all references.

(4) Field Collection and Data Assessment Techniques

Field collections for fish will be conducted at all stream locations. Sampling will be conducted using longline or boat electrofishing techniques and will consist of shocking all habitat types within a sampling zone, which are 0.15, 0.20 and 0.50 kilometers in length for headwater, wading, and boat sites, respectively. Headwater and wading sites will be sampled while moving from downstream to upstream. Boating sites will be sampled moving from upstream to downstream. The stunned fish will be collected and placed into a live well for later identification. The longline and boat electrofishing zones will be conducted between one to three times during the field season (June 15 - October 15).

Fish will be identified to the species level, weighed (wading and boat sites only), counted, and examined for the presence of external anomalies including DELTs. Fish easily identified (commonly collected from year to year) will be returned to the site from which they are collected, except for required vouchers. All species not identified in the field will be brought back to the laboratory for verification by NEORSD Level 3 Qualified Data Collectors (QDC's). If necessary, vouchers will be sent to The Ohio State University Museum of Biological Diversity for verification by the Curator and/or Associate Curator of Fish. Voucher specimens will be collected as described in section (14). Endangered species and those too large for preservation will not be collected as voucher specimens, but will instead be photographed. Photographed vouchers will include features that permit definitive identification of the particular species.

Fish will be preserved in 10 percent formalin in the field, soaked in tap water for 24 to 48 hours after 5 to 7 days, then transferred to solutions of 30 and 50 percent ethanol for 5 to 7 days each and, finally, to 70 percent ethanol for long-term storage. Specimens larger than six inches will be slit along the right side and then soaked in 10 percent formalin for approximately 10 to 14 days before being transferred to water and solutions of 30, 50 and 70 percent ethanol, respectively. Label information will include location (description and coordinates), date, time, collectors' names and sample identification code for each specimen collected.

Macroinvertebrate sampling will be conducted using quantitative and qualitative sampling techniques. Quantitative sampling will be done using a modified Hester-Dendy multi-plate artificial substrate sampler (HD) that is colonized for a six-week period. Multiple HD samplers will be installed at one or all sampling locations in case samplers are lost due to vandalism, burial, etc. and for the purposes of providing a replicate sample. Qualitative sampling will be conducted using a D-frame dip net when HD samplers are retrieved. The NEORSD Macroinvertebrate Field Sheet will be completed during sampling. NEORSD may

complete replicates as needed for additional information, training and identification purposes.

Macroinvertebrate voucher specimens for both quantitative and qualitative sampling will be collected as described in section (13). Macroinvertebrate community assemblages collected will be shipped to MBI for identification and enumeration. MBI will identify specimens to the lowest practical taxonomic level as recommended in Ohio EPA's *Biological Criteria for the Protection of Aquatic Life, Volume III* (1987b).

A detailed description of the sampling and analysis methods utilized in the fish community and macroinvertebrate community surveys, including calculations of the IBI, MIwb and ICI, can be found in Ohio EPA's *Biological Criteria for the Protection of Aquatic Life, Volumes II* (1987a) and *III* (1987b).

The QHEI, as described in Ohio EPA's *Methods for Assessing Habitat in Flowing Waters: Using the Qualitative Habitat Evaluation Index (QHEI)* (2006a) will be used to assess aquatic habitat conditions at each sample location.

Techniques used for water chemistry sampling and chemical analyses will follow the *Manual of Ohio EPA Surveillance Methods and Quality Assurance Practices* (2009a). Chemical water quality samples from each site will be collected with two 4-liter disposable polyethylene cubitainers with disposable polypropylene lids and two 473-mL plastic bottles. Bacteriological samples will be collected in a disposable sterile plastic bottle; if required, sodium thiosulfate may be used for preservation. All water quality samples will be collected as grab samples. One duplicate sample and one field blank will be collected at randomly selected sites at a frequency of not less than 10% of the total samples collected for this study plan. The acceptable relative percent difference (RPD) for field duplicate samples will be ≤40 percent; results outside this range will trigger further evaluation and investigation into causes for disparities. RPD values above 40 percent, with results less than ten times the practical quantitation limit, will be reviewed on a case-by-case basis to determine if there is any merit for further investigation. Acid preservation of the samples, as specified in the NEORSD laboratory's standard operating procedure for each parameter, will occur in the field. Appendix B lists the analytical method, method detection limit and practical quantitation limit for each parameter analyzed. Field analyses include the use of either a YSI-556 MPS Multi-Parameter Water Quality Meter or YSI 600XL sonde to measure dissolved oxygen (DO), water temperature, conductivity and pH; and when necessary, a Hanna HI 98129 meter to measure pH and a Hach LDO meter to measured DO. Turbidity will be measured using either a Hach 2100P IS Portable Turbidimeter, or Hach 2100Q Portable Turbidimeter. Specifications for these meters have been included in Appendix D.

Benthic and water column chlorophyll *a* samples may be collected if time and resources allow. Sampling methods will follow those detailed in the NEORSD *Chlorophyll a Sampling and Field Filtering Standard Operating Procedure* (SOP-EA001-00 (Appendix F). A Chlorophyll *a* Sampling Field Sheet will be completed for each site (Appendix E), when applicable. Water chemistry grab samples will be collected at the same time using the methods discussed previously and will be analyzed for nutrients, turbidity, alkalinity and suspended solids.

Where possible, data assessment will include an analysis of temporal and spatial trends in the collected data. Species assemblages and individual metrics will be analyzed. Graphs that show current and historic QHEI, IBI, MIwb and ICI scores and how these scores compare to attainment status of biocriteria will be prepared. Water chemistry data collected will be compared to Ohio water quality standards as described in Ohio EPA's *State of Ohio Water Quality Standards Ohio Administrative Code Chapter 3745-1* (2009b) to determine whether any excursions from the applicable water quality criteria have occurred. It will also be used to determine any relationships among individual parameters and chlorophyll *a* concentrations. Comparisons between water quality and biological community health will only be made if at least three water quality samples have been collected from that site.

(5) Stream Flow Measurement

Stream flow will be recorded for all locations during each electrofishing pass utilizing data from the United States Geological Survey (USGS) gauge station nearest the stream location, if applicable.

Stream flow will be measured with a Marsh-McBirney FloMate Model 2000 Portable Flow Meter or Global Water FP111 Flow Probe, which measure flow in feet per second, when HD samplers are installed and retrieved. See Appendix D for technical specifications for each flow meter.

(7) Schedule

One to three electrofishing surveys will be conducted at headwater, wading and boat sites, between June 15 and October 15, 2012. Surveys will be conducted at least three weeks apart. Specific dates have not been scheduled. River flow and weather conditions will be assessed weekly to determine when each electrofishing pass will be conducted.

Artificial substrate samplers will be installed at stream locations once between June 15 and August 17, 2012, and retrieved six weeks later. Qualitative macroinvertebrate sampling will be conducted one time at all sites. Specific dates have not been scheduled. River flow and weather conditions will be assessed weekly to determine when the HD sampler installations and retrievals and qualitative sampling will be conducted.

QHEI habitat evaluations will be conducted one time between June 15 and October 15, 2012. These evaluations will be conducted around the same time as one of the electrofishing surveys.

Water chemistry samples will be collected a minimum of three times from stream locations between June 15 and October 15, 2012.

Benthic and water column chlorophyll *a* samples may be collected at least one time from stream locations between June 15 and October 15, 2012. These samples will be collected under low-flow conditions.

(8) QA/QC

Quality assurance and quality control of sampling and analysis methods for habitat, fish, and macroinvertebrate evaluations will follow Ohio EPA's *Biological Criteria for the Protection of Aquatic Life, Volumes II* (1987a) and *III* (1987b) and *Methods for Assessing Habitat in Flowing Waters: Using the Qualitative Habitat Evaluation Index (QHEI)* (2006a).

Electrofishing equipment will be used according to the guidelines listed in the operation and maintenance manual provided by Smith-Root, Inc. Malfunctioning equipment will not be used to collect data. Proper steps will be taken to correct any problems as soon as possible, whether by repairing in the field, at the NEORSD Environmental and Maintenance Services Center, or by contacting the supplier or an appropriate service company.

All unidentifiable fish species will be brought back to the laboratory for verification by Level 3 QDC's and if necessary, sent to The Ohio State University Museum of Biological Diversity for verification by the Curator and/or Associate Curator of Fish. Voucher specimens will be collected as described in section (13). Endangered species and those too large for preservation will not be collected as voucher specimens, but will instead be photographed. Photographed vouchers will include features that permit definitive identification of the particular species.

All macroinvertebrate community assemblages from stream locations, except for any replicate samples, will be collected and shipped to MBI for identification and

enumeration. All specimens will be identified to the lowest practical taxonomic level as recommended in Ohio EPA's *Biological Criteria for the Protection of Aquatic Life, Volume III* (1987b). All macroinvertebrate specimens will be returned to NEORSD. At least two voucher specimens of each species, when available, will be separated into individual vials and kept as described in section (13). The remaining specimens for each site will be returned in a single container labeled with the site number and collection method and date. All specimens and accompanying chain-of-custody documentation will be retained by NEORSD and stored at the Environmental and Maintenance Services Center for a period not less than ten years.

Water samples obtained for chemical analyses will be collected, preserved (see section (4), labeled and then placed on ice inside the field truck. The field truck will remain locked at all times when not occupied/visible. Sampling activities, including sample time and condition of surface water sampled, will be entered in a field log book and on the Surface Water Condition Sampling Field Data Form (Appendix C). The samples will then be delivered immediately to the NEORSD Analytical Services cooler, after which the door to the cooler will be locked, and the samples will be transferred to the custody of Analytical Services. The most current NEORSD Analytical Services Quality Manual (effective date November 18, 2011) and associated Standard Operating Procedures are on file with Ohio EPA. The Quality Assurance Officer at Analytical Services will send updates, revisions and any information on document control to Ohio EPA as needed.

For benthic and water column chlorophyll *a* sampling, three filtrations will be performed for each sample. A field filtration blank will be submitted for every 20 samples.

(9) Work Products

Within one year of completion of the project, fish data (species, numbers, weights, pollution tolerances, the incidence of DELT anomalies, IBI and MIwb scores), macroinvertebrate data (types and numbers of macroinvertebrates collected and ICI scores), habitat data (QHEI raw data and scores) and water chemistry results will be submitted to the Ohio EPA. Additionally, reports summarizing, interpreting, graphically presenting and discussing the IBI, MIwb, ICI and QHEI scores, chlorophyll *a* results, and any excursions from water quality standards may be prepared for internal use.

(10) Qualified Data Collectors

The following Level 3 Qualified Data Collectors (QDC) will be involved with this study:

Name	Address	Email Address	Phone Number	QDC Specialty(s)
John W. Rhoades	4747 East 49th Street Cuyahoga Hts., Ohio 44125	rhoadesj@neorsd.org	216-641-6000	QDC - 00008 CWQA/FCB/SHA/ BMB
Cathy Zamborsky	4747 East 49th Street Cuyahoga Hts., Ohio 44125	zamborskyc@neorsd.org	216-641-6000	QDC - 00009 CWQA/SHA

Cuyahoga Heights, OH 44125
citrigliam@neorsd.org
216-641-6000

Any fish that is not positively identified in the field or at NEORSD will be sent to The Ohio State University Museum of Biological Diversity for verification by the Curator and/or Associate Curator of Fish. Fish will be identified to the species level.

Dr. Ted Cavender, Curator of Fish / Mr. Marc Kibbey, Associate Curator of Fish
1315 Kinnear Road, Columbus, Ohio 43212
cavender.1@osu.edu / kibbey.3@osu.edu
614-292-7873

Identification of macroinvertebrates for stream locations will be completed by MBI (Columbus, Ohio). Benthic macroinvertebrates will be identified to the

lowest practical level as recommended by Ohio EPA (1987b). MBI contact information:

Mr. Chris Yoder
Midwest Biodiversity Institute
P.O. Box 21561
Columbus, Ohio 43221
yoder@rrohio.com
614-457-6000

(12) Copy of ODNR collector's permit

See Appendix I for Ohio Department of Natural Resources Division of Wildlife Wild Animal Scientific Collection Permit.

(13) Digital Catalog Statement

A digital photo catalog of all sampling locations will be maintained for 10 years and will include photos of the specific sampling location(s), the riparian zone adjacent to the sampling location(s) and the general land use in the immediate vicinity of the sampling location(s).

Print/Signature: John W. Rhoades / Date: _____

(14) Voucher Specimen Statement

NEORSD will maintain a benthic macroinvertebrate and fish voucher collection which includes two specimens, or appropriate photo vouchers, of each species or taxa collected during the course of biological sampling from any stream within the NEORSD's service area. When benthic macroinvertebrates from multiple surface waters are collected within the same year and identified by the same QDC, one voucher collection will be created to represent the specimens collected from those streams. When fish specimens from multiple surface waters are collected within the same year, one voucher collection will be created to represent the specimens collected from those streams. A separate collection for each sampling event will not be maintained.

NEORSD will provide specimens or photo vouchers to the Director upon request. This collection will be stored at the NEORSD's Environmental and Maintenance Services Center.

Print/Signature: John W. Rhoades / Date: _____

(15) Sample Location Statement

I attest that I will make available any and all sampling location information, including but not limited to; the name of the water body sampled, sampling location latitude and longitude, sampling location river mile where possible, general location information, the U.S. geological survey HUC 8 number and name, and the purpose for data collection at each sampling location.

Print/Signature: John W. Rhoades / Date: _____

(16) Additional L3 Data Collector Statement

It is anticipated that the Midwest Biodiversity Institute will be contracted to complete macroinvertebrate identification and to create the macroinvertebrate voucher collection. However, awarding of the contract is dependent upon approval by the Northeast Ohio Regional Sewer District Board of Trustees, which, to date, has not occurred. Once the contract is awarded, the person responsible to complete the identification and create the voucher collection will provide a letter stating their role. The letter will be submitted electronically when finalized. An amendment to the study plan will be submitted if an alternative party is awarded the contract.

The Lead Project Manager for all NEORSD project study plans is approved for all other project data types.

Print/Signature: John W. Rhoades / Date: _____

(17) Trespassing Statement

I have not been convicted or pleaded guilty to a Violation of section 2911.21 of the Revised Code (criminal trespass) or a substantially similar municipal ordinance within the previous five years.

14.1 Sensor Specifications

Dissolved Oxygen		
Sensor Type		Steady state polarographic
Range:	*% air sat'n*	▪ 0 to 500% air saturation
	mg/L	▪ 0 to 50 mg/L
Accuracy:	*% air sat'n*	▪ 0 to 200% air saturation: ±2% of the reading or 2% air saturation; whichever is greater ▪ 200 to 500% air saturation: ±6% of the reading
	mg/L	▪ 0 to 20 mg/L: ±2% of the reading or 0.2 mg/L; whichever is greater ▪ 20 to 50 mg/L: ±6% of the reading
Resolution:	*% air sat'n*	▪ 0.1% air saturation
	mg/L	▪ 0.01 mg/L
Temperature		
Sensor Type:		YSI Precision™ thermistor
Range:		-5 to 45°C
Accuracy:		±0.15°C
Resolution:		0.01°C
Conductivity		
Sensor Type:		4-electrode cell with auto-ranging
Range:		0 to 200 mS/cm
Accuracy:		±0.5% of reading or ±0.001 mS/cm; whichever is greater–4 meter cable ±1.0% of reading or ±0.001 mS/cm; whichever is greater–20 meter cable
Resolution:		0.001 mS/cm to 0.1 mS/cm (range-dependent)
Salinity		
Sensor Type:		Calculated from conductivity and temperature
Range:		0 to 70 ppt
Accuracy:		±1.0% of reading or 0.1 ppt; whichever is greater
Resolution:		0.01 ppt

YSI 650 Multiparameter Display System

Rugged and Reliable Display and Data Logging System

The YSI 650 Multiparameter Display System

Easily log real-time data, calibrate YSI 6-Series sondes, set up sondes for deployment, and upload data to a PC with the feature-packed YSI 650MDS (Multiparameter Display System). Designed for reliable field use, this versatile display and data logger features a waterproof IP-67, impact-resistant case.

- **Compatible with EcoWatch® for Windows® data analysis software**
- **User-upgradable software from YSI's website**
- **Menu-driven, easy-to-use interface**
- **Multiple language capabilities**
- **Graphing feature**
- **Three-year warranty**

Feature-Packed Performance

Battery Life

With the standard alkaline battery configuration of 4 C-cells, the YSI 650 will power itself and a YSI 6600 sonde continuously for approximately 30 hours. Or, choose the rechargeable battery pack option with quick-charge feature.

Optional Barometer

Temperature-compensated barometer readings are displayed and can be used in dissolved oxygen calibration. Measurements can be logged to memory for tracking changes in barometric pressure.

Optional GPS Interface

Designed to NMEA protocol, the YSI 650 MDS will display and log real-time GPS readings with a user supplied GPS interfaced with YSI 6-Series sondes.

Memory Options

Standard memory with 150 data sets, or a high-memory option (1.5 MB) with more than 50,000 data sets; both options with time and date stamp.

Pure Data for a Healthy Planet.®

A powerful logging display for your data collection processes

The 650MDS can be used with YSI sondes for spot sampling as well as short-term data logging.

Supply a GPS with NMEA 0183 protocol, connect with the YSI 6115 kit, and collect GPS data along with water quality data.

Upload data from the 650 to EcoWatch® for instant data viewing.

YSI 650MDS Specifications

Temperature	Operating Storage	-10 to +60°C for visible display -20 to +70°C
Waterproof Rating		IP-67 for both the standard alkaline battery configuration and for the rechargeable battery pack option
Connector		MS-8; meets IP-67 specification
Dimensions	Width Length Weight with batteries	4.7 in, 11.9 cm 9 in, 22.9 cm 2.1 lbs, 0.91 kg
Display		VGA; LCD with 320 by 240 pixels with backlight
Power	Standard Optional	4 alkaline C-cells with detachable battery cover Ni metal hydride battery pack with attached battery cover and 110/220 volt charging system
Communications		RS-232 to all sondes, for data transfer to PC, and for software updates
Optional GPS		NMEA 0183; requires user-supplied GPS and YSI 6115 Y-cable
Backlight		4 LEDs illuminating LCD; user-selectable
Keypad		20 keys, including instrument on/off, backlight on/off, enter, esc, 10 number/letter entry keys, 2 vertical arrow keys, 2 horizontal arrow keys, period key, and minus key
Warranty		3 years

Ordering Information

650-01	Instrument, standard memory
650-02	Instrument, high memory
650-03	Instrument, standard memory, barometer
650-04	Instrument, high memory, barometer
6113	Rechargeable battery pack kit with 110 volt charger and adapter cable
616	Charger, cigarette lighter
4654	Tripod
614	Ultra clamp, C-clamp mount
5081	Carrying case, hard-sided
5085	Hands-free harness
5065	Form-fitted carrying case
6115	Y-cable for interface with user-supplied GPS system

The 650MDS can interface with any YSI sonde for
- *spot sampling*
- *short-term studies*
- *surface and ground water monitoring*
- *water level monitoring*

Packaged together, the 600QS system includes a 600R conductivity sonde, 650MDS, field cable, and additional sensor options such as pH, dissolved oxygen, ORP, and vented level.

YSI 600XL and 600XLM Sondes

The YSI 600XL and 600XLM

Measure multiple parameters simultaneously

The YSI 600XL and YSI 600XLM compact sondes measure eleven parameters simultaneously:

Temperature	TDS
Conductivity	pH
Specific Conductance	ORP
Salinity	Depth or Level
Resistivity	Rapid Pulse™ DO (% and mg/L)

Connect with Data Collection Platforms

Either sonde can easily connect to the YSI 6200 DAS (Data Acquisition System), YSI EcoNet™ or your own data collection platform, via SDI-12 for remote and real-time data acquisition applications.

Economical Logging System

The YSI 600XLM is an economical logging system for long-term, *in situ* monitoring and profiling. It will log all parameters at programmable intervals and store 150,000 readings. At one-hour intervals, the instrument will log data for about 75 days utilizing its own power source. The 600XL can also be utilized in the same manner with user-supplied external power.

- **Either sonde fits down 2-inch wells**
- **Horizontal measurements in very shallow waters**
- **Stirring-independent Rapid Pulse® dissolved oxygen sensor**
- **Field-replaceable sensors**
- **Easily connects to data collection platforms**
- **Available with detachable cables to measure depth up to 200 feet**
- **Compatible with YSI 650 Multiparameter Display System**
- **Use with the YSI 5083 flow cell for groundwater applications**

Pure Data for a Healthy Planet.®

Economical, multiparameter sampling or logging in a compact sonde

Sensor performance verified*

The 6820 V2 and 6920 V2 sondes use sensor technology that was verified through the US EPA's Environmental Technology Verification Program (ETV). For information on which sensors were performance-verified, turn this sheet over and look for the ETV logo.

YSI model 5083 flow cell and 600XL. This is an ideal combination for groundwater applications.

HI 98129

Combo pH/EC/TDS/Temperature Tester with Low Range EC

Description

The HI 98129 Combo waterproof tester offer high accuracy pH, EC/TDS and temperature measurements in a single tester! No more switching between meters for your routine measurements. The waterproof Combo (it even floats) has a large easy-to-read, dual-level LCD and automatic shut-off. pH and EC/TDS readings are automatically compensated for the effects of temperature (ATC). This technologically advanced tester has a replaceable pH electrode cartridge with an extendable cloth junction as well as an EC/TDS graphite electrode that resists contamination by salts and other substances. This gives these meters a greatly extended life. Your tester no longer needs to be thrown away when the pH sensor is exhausted.

The EC/TDS conversion factor is user selectable as is the temperature compensation coefficient (ß). Fast, efficient, accurate and portable, the Combo pH, EC/TDS and temperature tester brings you all the features you've asked for and more!

Specifications

Range	pH	0.00 to 14.00 pH
Range	EC	0 to 3999 µS/cm
Range	TDS	0 to 2000 ppm
Range	Temperature	0.0 to 60.0°C / 32 to 140.0°F
Resolution	pH	0.01 pH
Resolution	EC	1 µS/cm
Resolution	TDS	1 ppm
Resolution	Temperature	0.1°C / 0.1°F
Accuracy	pH	±0.05 pH
Accuracy	EC/TDS	±2% F.S.
Accuracy	Temperature	±0.5°C / ±1°F
Temperature Compensation		pH: automatic; EC/TDS: automatic with ß adjustable from 0.0 to 2.4% / °C
Calibration	pH	automatic, 1 or 2 points with 2 sets of memorized buffers (pH 4.01 / 7.01 / 10.01 or 4.01 / 6.86 / 9.18)
Calibration	EC/TDS	automatic, 1 point
TDS Conversion Factor		adjustable from 0.45 to 1.00
pH Electrode		HI 73127 (replaceable; included)
Environment		0 to 50°C (32 to 122°F); RH max 100%
Battery Type / Life		4 x 1.5V / approx. 100 hours of continuous use; auto-off after 8 minutes of non-use
Dimensions		163 x 40 x 26 mm (6.4 x 1.6 x 1.0")
Weight		100 g (3.5 oz.)

2100P IS Portable Turbidimeter

Specifications

2100P Portable Turbidimeter Specifications:

Ranges:	0-1000 NTU with automatic decimal point placement or manual range selection of 0-9.99, 0-99.9 and 0-1000 NTU selection.
Accuracy:	± 2% of reading plus stray light from 0 to 1000 NTU (stray light: <0.02 NTU)
Repeatability:	± 1% of reading or ± 0.01 NTU, whichever is greater
Resolution:	0.01 NTU on lowest range
Sample Required:	15 mL
Power Requirement:	Four AA alkaline batteries or optional 120 or 230 Vac battery eliminator.
Construction:	High-impact ABS plastic shell
Dimensions:	22.2 x 9.5 x 8.9 cm (8.75 x 3.75 x 3.5")
Shipping Weight:	3.6 kg (8 lb)
Warranty:	Two years

Specifications subject to change.

2020we & 2020wi Portable Turbidity Meters

The Clear Choice for Turbidity Measurement!

Industry-leading precision, sensitivity, and dependability in one of the most innovative **handheld meters** available on the market!

- **Waterproof** to IP67
- Lithium rechargeable battery
- USB port
- 7 languages
- Backlit display
- EPA and ISO versions

2020we Complies with USEPA 180.1 Standard

2020wi Complies with ISO 7027 Standard

Kit supplied with 0, 1, and 10 NTU standard, sample bottle, 4 sample tubes, USB cable, USB computer/wall adapter, and waterproof carrying case.

Order Codes	
1970-EPA	**2020we Kit:** Portable turbidity meter complies with USEPA 180.1 Standard
1970-ISO	**2020wi Kit:** Portable turbidity meter complies with ISO 7027 Standard

geotech

Orion AQUAfast AQ4500 Turbidimeter

Thermo Electron introduces the Orion AQ4500 Turbidimeter which offers advanced features not available on any other benchtop or portable turbidimeter. The AQ4500 offers a dual source LED which allows readings that comply with both EPA 180.1 and ISO 7027. Turbidity can be read in the range of 0 - 1000 NTU with a choice of units: NTU, FTU, FNU, ASBC, and EBC. In the range of 0 - 40 NTU the AQ4500 offers a ratiometric range which will give EPA, GLI method 2 equivalent numbers. This portable field unit is truly IP67 waterproof with typical battery life of over 1000 hours on one set of batteries and datalog capacity of 100 points which can later be downloaded to a printer or computer. The AQ4500 accepts 24 mm cuvettes and comes with a two year warranty.

FEATURES

- Nephelometric and Ratiometric measurements with Autoranging
- Data log capacity of up to 100 data points
- Readings in the range of 0 - 1000 NTU with a choice of units:
  NTU, FTU, FNU, ASBC, or EBC
- Includes Turbidity Standards kit, rugged carrying case, and replacement cuvettes
- Orion AQ4500 is truly IP67 waterproof to a depth of 3 meters

SPECIFICATIONS

Type	Turbidity Meter
Principle of Operation	Nepeholmetric
Operating Modes	Automatic
Measurement Modes	Automatic
Ranges	
NTU	0 - 2000
Nephelometric	0 - 4000
EPA	0 - 4000 NTU
ISO - NEPH (7027)	0 - 150 FNU
ISO - ABSB	40 - 4000 FAU
IR RATIO	0 - 4000 NTU
EBC	0 - 24.5
ASBC	0 - 236
Accuracy	± 2% of reading plus 0.01 NTU (0 - 500 NTU)
	± 3% of reading (500 - 1000 NTU)
	± 5% of reading (1000 - 2000 NTU)
Resolution	0.01 NTU (0 - 9.99)
	0.1 NTU (10 -99.9)
	1 NTU (100 - 1000)
Repeatability	± 1% of reading or 0.01 NTU
Response Time	< 8 seconds
Calibration	1, 10, 100, 1000 NTU
Signal Averaging	Yes
Sample Cell Size	24 mm
Sample Size	-12 mL
Display	Custom LED
RTC	Yes
Input/Output	RS-232 Serial Port
Power	Battery - four AA's (2,500 hours Alkaline, 10, 000 lithium)
Environmental Conditions	
Operating Temperature	-40° to 140°F (-40° to -60°C)
Humidity	90% RH at 30.0C max
Light Source	White, IR
Warranty	2 years
Weight	8 lbs (3.63 kg)
Safety Rating	UL, CSA, CE, FCC

6600EDS Extended Deployment System

Measure over 10 parameters in severe fouling environments Featuring Patented Clean Sweep® Anti-fouling Technology

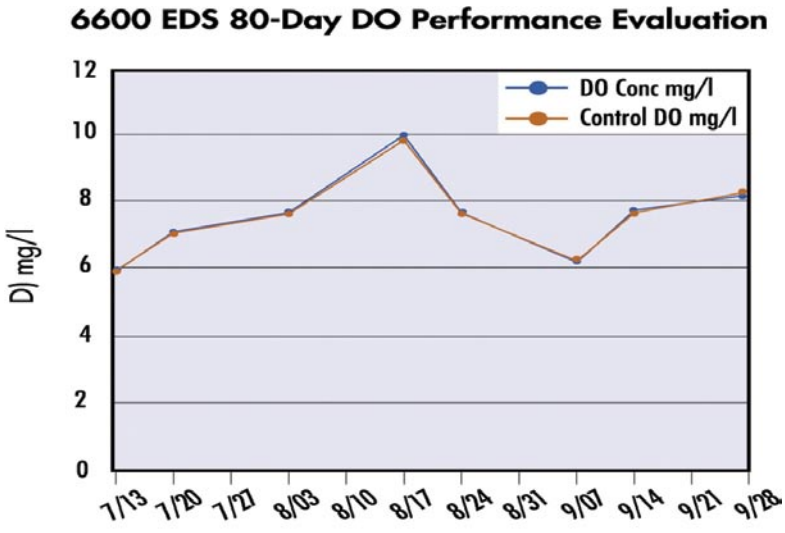
Profile of the 6600EDS depicting (clockwise from bottom) temperature/conductivity, turbidity, Rapid Pulse™ dissolved oxygen, chlorophyll and pH/ORP—all of which (except conductivity) are kept free of fouling by the patented Clean Sweep® universal wiper assembly, as well as individual optical wipers.

Building upon the unprecedented accuracy and reliability of YSI's stirring-independent Rapid Pulse™ dissolved oxygen system, as well as on the improved and proven wiped optical sensors, YSI offers the YSI 6600EDS (Extended Deployment System).

- **Provides unprecedented DO accuracy and longevity in aggressive fouling environments**
- **Patented wiped fouling protection for turbidity, chlorophyll, DO, BGA, pH, and ORP sensors**
- **Ideal for extended, long-term deployments**
- **Virtually maintenance free**
- **Sensors are field-replaceable**
- **Integrates with DCPs (via RS-232 or SDI-12)**

A prototype 6600EDS after continuous deployment for 80 days in Buzzards Bay, MA. The sensor in the foreground is the active DO sensor. The sensor at top-right was used as a non-wiped fouling reference. Note extensive fouling by plant and animal species on the non-wiped sensor.

Initial field studies of the YSI 6600EDS show that the system provides unprecedented DO accuracy and longevity in aggressive fouling environments. The 6600EDS was inspected after 80 days of an ongoing deployment performance evaluation. The Rapid Pulse™ DO sensor performed within specifications throughout this deployment without the need for recalibration or cleaning. During this deployment, the instrument was removed once for battery replacement; none of the sensors was cleaned or recalibrated.



Remarkably close agreement (mean error 0.16mg/l) between the continuously deployed sonde and the control measurements was observed throughout an 80-day deployment.

Pure Data for a Healthy Planet.®

*Sensor Performance verified by the EPA Environmental Technology Verification Program.**

Materials:	Probe: PVC and anodized aluminum with stainless steel water bearing Computer: ABS/Polycarbonate housing with polyester overlay
Power:	Internal Lithium, Approx 5 year life Non-Replaceable
Operating Temperature:	-20° to 70° C (-4° to 158° F) Non-Freezing
Storage Temperature:	-30° to 80° C (-22° to 176° F)

VIII. Maintenance

a. Probe Handle:
When the Flow Probe expansion joint becomes submerged, water will enter the Probe handle. After use, dry the Probe by separating the two handle sections, draining the water inside the Probe handle, and letting the handle dry out in a warm place before reassembling. The Flow Probe handle can be cleaned with mild soap and water. You should not submerge the top of the pole and the computer. If the computer gets submerged, remove it from the Flow Probe and dry with a soft cloth

Table of Contents

1.0 Scope and Application

1.1 The chlorophyll *a* sampling procedures provided herein apply to the collection of samples from streams by the WQIS Environmental Assessment group. Chlorophyll *a* is a pigment used by plants in the photosynthesis process and can be used to estimate the amount of algal biomass in a system. Sampling is usually conducted in the summer during low flow periods, when algal productivity is expected to be the highest.

2.0 Summary of Method

2.1 Two different types of chlorophyll *a* samples are collected for each site to determine algal production. Benthic chlorophyll *a* samples are collected to determine algal biomass that is attached to the stream substrate. Water column chlorophyll *a* samples are collected to determine algal biomass that has sloughed off from the substrate. Samples that are collected are homogenized and then filtered through glass fiber filters. Filtering is either completed in the field or at the Environmental Maintenance and Services Center (EMSC). The time required for sampling with three individuals is approximately one hour per site.

3.0 Definitions

3.1 Clinometer- device used to determine angles of incline for canopy cover

4.0 Qualified Personnel

4.1 If data is needed to be credible, at least one person conducting the evaluation is a certified Ohio EPA Level III Qualified Data Collector for chemical water quality assessment.

5.0 Equipment and Supplies

5.1 Equipment and Supplies for Collection of Benthic Samples

5.1.1 Waders

5.1.2 Buckets

5.1.3 Clinometer

5.1.4 GPS

5.1.5 NEORSD Chlorophyll *a* Sampling Field Sheet

5.1.6 Chisel

5.1.7 Gloves, nitrile or shoulder length

5.1.8 Clipboard

5.1.9 Writing implement

5.2 Equipment and Supplies for Processing Benthic Samples

5.2.1 Non-functioning ball-point pen

5.2.2 Medium or hard bristle brush (diameter less than or equal to 20 mm)

5.2.3 Electric drink stirrer

5.2.4 Forceps

5.2.5 Container for algal slurry

5.2.6 Graduated cylinder

5.2.7 Squirt bottles filled with tap water

5.2.8 Pipetter and 5 mL pipette

5.2.9 Aluminum foil

5.2.10 Cut off syringe (diameter about 22 mm)

5.2.11 Ruler

5.2.12 Scalpel

5.2.13 Sample labels and tape

5.2.14 Erlenmeyer flask with one-hole stopper

5.2.15 300mL filter funnel with magnetic base (For field filtering)

5.2.16 47mm glass fiber filters, (Like Millipore Cat. No. APFF04700)

5.2.17 Vacuum system (3-4 psi) (For field filtering)

5.2.18 Vacuum source or pump capable of maintaining a vacuum up to 6 in. Hg. (For laboratory filtering)

5.2.19 6.7 Filtering Apparatus, (Like Gelman Sciences Cat. No. 4205) (For laboratory filtering)

5.2.20 Microspatula

5.2.21 15mL centrifuge tube with screw cap

5.2.22 Cooler (ice or dry ice to be determined by project)

5.3 Equipment and Supplies for Water Column Sampling

5.3.1 Glass container (which holds about 0.5 liters)

5.3.2 Graduated cylinder (at least 100 mL)

5.3.3 Aluminum foil and masking tape

5.3.4 Filtering equipment from benthic sampling

5.3.5 Forceps

5.3.6 15mL centrifuge tubes with screw cap

5.3.7 Cooler with sample preservation method to be determined by project

6.0 Procedure

6.1 For a representative benthic sample, select approximately 15 rocks from the middle of the stream. Rocks should not be collected from margin areas because they may be light limited.

6.2 Determine the angle of light at all locations where rocks are collected using the clinometer. If the angle is greater than 45°, it can be assumed that the rocks at that location are not light limited and can be included in the sample.

6.3 Select rocks that have not been recently disturbed. This can be determined by examining the rock and noting differences in coloration due to the presence of algae.

6.4 If necessary, bedrock samples can be obtained by chiseling out a section at least 50mm x 50mm.

6.5 Place collected samples in a bucket that contains enough water to cover all the rocks.

6.6 Fill out all information on NEORSD Chlorophyll *a* Sampling Field Sheet (Attachment A) regarding stream and weather conditions. Include a drawing of the stream reach where the samples were collected.

6.7 Samples should be processed immediately after collection to minimize light degradation.

6.8 The rocks should be processed over a pan to allow for the collection of all water used in processing. Be conservative in the amount of water that is used to allow for it all to be collected in the graduated cylinder.

6.9 Prior to processing the rocks, cut off the tip of a 5mL pipette.

6.10 Place the cut off end of the syringe around a representative area on rock.

6.11 Use a non-functioning pen tip to scribe a circle around the inside of the cut off syringe (Figure 1).

6.12 Use a squirt bottle to rinse the inside of the syringe into the pan.

6.13 Break up algae within the circle by scoring it with a scalpel.

6.14 Scrape surface of the rock using the scalpel.

6.15 Use the brush to remove the scraped algal mass. Use the squirt bottle to rinse off the scraped material from the brush.

6.16 Continue scraping rock until all the algal mass has been removed (Figure 2).

6.17 Rinse rock with water.

6.18 Measure the diameter of each circle scraped (Figure 3) and record on sample form. Two measurements per circle should be taken and averaged.

6.19 Filtering can either be completed in the field or at EMSC. If filtering occurs in the field, a filtering apparatus should be set up using the Erlenmeyer flask, filter funnel, and hand-operated vacuum pump (Figure 4). Filters should be glass fiber with a 47 mm diameter.

6.20 Establish a vacuum first. The filter frit should then be wetted before the filter is placed on it.

6.21 Composite samples from all rocks collected into one container. Measure total volume of the sample using the graduated cylinder and record on field sheet.

6.22 Use an electric drink stirrer to adequately mix the sample.

6.23 Take one 5mL aliquot of the algal slurry with the cut off pipette and put into the filter funnel.

6.24 After the sample is filtered, remove the filter from the frit using the forceps. Place the filter in a centrifuge tube and completely cover the tube with aluminum foil.

6.25 Seal the aluminum foil with masking tape and put on ice. If the samples will be returned to the Environmental Maintenance Service Center (EMSC) at the end of sampling, regular ice can be used. For longer than 12 hours, use dry ice.

6.26 Three replicate samples should be done at each site to allow for an assessment of precision.

6.27 For every ten samples, put tap water through the filtering procedures for use as a field blank.

6.28 For use in the determination of water column chlorophyll *a* concentrations, obtain a grab sample from the middle of the stream in the same vicinity in which the rocks were collected.

6.29 Filtering of the water column sample can either take place in the field or once back at EMSC.

6.30 If filtering in the field, use an electric drink stirrer to adequately mix the sample.

6.31 Filter three separate 100 mL samples using the filtering apparatus and glass fiber filters.

6.32 After the sample is filtered, remove the filter from the frit using the forceps. Place the filter in a centrifuge tube and completely cover the tube with aluminum foil.

6.33 Place centrifuge tubes on ice. If the samples will be returned to the Environmental Maintenance Service Center (EMSC) at the end of sampling, regular ice can be used. For longer than 12 hours, use dry ice.

6.34 If samples are not filtered in the field, place them in a cooler filled with regular ice.

6.35 Upon return to EMSC, filter the benthic and water column samples if necessary.

6.35.1 Gently agitate the sample to suspend the particulates

6.35.2 Measure the sample in a graduated cylinder: 5mL for the benthic samples and 100mL for the water column samples.

6.35.3 Secure the filtration unit onto the vacuum apparatus.

6.35.4 Place 47 mm glass, fiber filter onto the filtration base.

6.35.5 Filter the sample under vacuum not exceeding 6 in. Hg (20 kPa).

6.35.6 Monitor the pressure of the vacuum during filtration and adjust as needed during the process.

6.35.7 Do not suck the filter dry with the vacuum; instead slowly release the vacuum as the final volume approaches the level of the filter, add 3 drops of magnesium carbonate.

6.35.8 Completely release the vacuum as the last bit of water is pulled through the filter.

6.35.9 Fold the fiber filter in half with the particulate matter inside.

6.35.10 Lightly blot the outside of the filter with a paper towel to remove excess moisture.

6.35.11 Remove the filter from the filtration unit with smooth tip tweezers.

6.35.12 Place the filter into a 15-mL screw-cap centrifuge tube and cover the outside of the tube with foil.

6.36 Enter sample collection times, field parameters and any necessary observations into LabLynx.

6.37 Print chain of custody forms from LabLynx and hand deliver along with the samples to the Sample Control Specialist or an Analytical Services Supervisor in the sample receiving area. The Chain of Custody(s) must be signed off by the WQIS Investigator, or QDC Level 3 for Chemistry if credible data is required, and either the Sample Control Specialist or Analytical Services Supervisor.
