

Level 3 Project Study Plan

2008 Benthic Macroinvertebrate Sampling Upstream of NEORSD CSO Areas

(1) Objective

The objective of this study is to conduct benthic macroinvertebrate and water quality sampling upstream from areas of Northeast Ohio Regional Sewer District (NEORSD)-owned combined sewer overflows (CSOs). The resulting upstream data will be compared with the benthic macroinvertebrate data obtained from these streams, downstream of the NEORSD CSO areas (required by Ohio EPA NPDES Permit No. 3PA00002*FD) to determine the extent to which downstream macroinvertebrate communities may be impacted by CSOs or other environmental factors. This sampling will be conducted by the NEORSD's Water Quality and Industrial Surveillance department (WQIS) and will occur from June 15 through September 30, 2008, as required in the OEPA *Biological Criteria for the Protection of Aquatic Life Volume III* (1987, updated September 30, 1989 and November 8, 2006).

Sample sites for this study are located on Big Creek, Doan Brook, Euclid Creek and Mill Creek, all of which are surface waters within the NEORSD service area. Quantitative and qualitative benthic macroinvertebrate sampling will be conducted at each sample site. The benthic macroinvertebrate results will be compiled and used to calculate an Invertebrate Community Index (ICI) score for each site. Species assemblages and individual metrics will be analyzed. Water sampling data will be evaluated to determine the presence and/or absence of excursions from water quality criteria. An examination of the individual metrics that comprise the ICI will be used in conjunction with water quality data, the Ohio EPA Macroinvertebrate Field Sheet and Qualitative Habitat Evaluation Index (QHEI) results in order to identify impacts to the communities. Results will also be compared to historic data to show temporal as well as spatial trends.

In addition to the above sampling, NEORSD will attempt to conduct fish community sampling at each of the sample sites on Big Creek, Doan Brook, Euclid Creek and Mill Creek. This sampling will be dependent upon weather and stream conditions, as well as, availability of NEORSD personnel. If the sampling is conducted, fish community health will be evaluated through the use of Ohio EPA indices [Index of Biological Integrity (IBI) and the Modified-Index of Well-Being (MIwb), where applicable]. An examination of the individual metrics that comprise the IBI will be used in conjunction with water quality data and QHEI results in order to identify impacts to the fish community.

(2) Nonpoint/Point Sources

| Point Sources | Nonpoint Sources |
|---------------------------------------|--------------------|
| CSO(s) outside of NEORSD service area | Urban Runoff |
| Storm Sewer Outfalls | Landfill Leachate |
| Upstream tributaries | Spills |
| Home Sewage Treatment Systems | Agriculture |
| | Golf Course Runoff |

A map has been provided in Appendix A to show point sources that may be influencing the water quality at each sample location. These sources of pollution, along with the nonpoint sources listed in the table above, may be impacting the health of the fish and benthic macroinvertebrate communities and will need to be taken into account when evaluating impacts resulting from NEORSD CSOs. Other factors that may influence ecological conditions during the study include periods of drought and periods of heavy precipitation.

(3) Parameters Covered

Macroinvertebrate quantitative and qualitative samples will be collected and shipped to EA Engineering, Science and Technology for identification and enumeration. If construction begins during the 2008 season on the West Creek Restoration Project, then Tiffany Moore of NEORSD and Marty Sneen of EA Engineering, Science and Technology, both Level 3 QDCs for Benthic Macroinvertebrate Biology, will identify the specimens to the lowest practical taxonomic level and whenever possible, to the level of taxonomy recommended in Ohio EPA's *Biological Criteria for the Protection of Aquatic Life, Volume III* (1987, updated September 30, 1989 and November 8, 2006).

The purpose of the study is not intended to determine full biological attainment of the designated use of each water body, but simply to determine the impacts that combined sewer overflows have on the macroinvertebrate community. This is consistent with Ohio EPA permit #3PA00002*FD, which does not require the collection of fish where macroinvertebrates are collected. However, an effort will be made to conduct fish community sampling at each of the sample sites for informational purposes.

The Ohio EPA Macroinvertebrate Field Sheet will be completed at each site during the quantitative sampler retrieval. In addition, stream habitat will be measured by scoring components of the QHEI at all locations, including the substrate, instream cover, channel morphology, riparian zone and bank erosion, pool/glide and riffle/run quality and gradient.

Water chemistry sampling will be conducted at each sampling site. Sampling frequency is discussed below in section (6). Appendix B lists the parameters to be tested. Field measurements for dissolved oxygen, pH, temperature, specific conductance and stream velocity will also be performed. A water quality observation checklist will be completed at each site during each sample collection (Appendix B).

Fish specimens will be identified to species level, weighed (where applicable), counted and examined for the presence of external anomalies including DELTs (deformities, eroded fins, lesions and tumors).

(4) Field Collection and Data Assessment Techniques

Macroinvertebrate sampling will be conducted using quantitative and qualitative sampling techniques at the locations identified in section 5. Two rounds of quantitative sampling will include installation of a five Hester-Dendy multi-plate artificial substrate sampler assemblage (HD) that is colonized for a six-week period. Multiple HD samplers may be installed at one or all of the locations during each round of sampling in case samplers are lost due to vandalism, burial, etc. Furthermore, multiple qualitative samples may be collected during each sampling round, in case of HD sampler loss, in order to sample the macroinvertebrate community during normal flow conditions. Additionally, five Surber square-foot samples may be used in place of an HD sampler where deemed uncollectible due to the HD sampler having been vandalized, buried, etc. Surber samples, if supplemented for a HD sampler, will be used for informational purposes only, and will not be used to calculate an ICI score. Qualitative sampling will be conducted using a D-frame dip net when HD samplers are retrieved. The Ohio EPA Macroinvertebrate Field Sheet will be completed during each HD retrieval. Macroinvertebrate community assemblages will be collected and shipped to EA Engineering, Science and Technology for identification and enumeration. EA Engineering, Science and Technology will identify specimens to the lowest practical taxonomic level and when the condition of the specimen allows, to the level of taxonomy recommended in Ohio EPA's *Biological Criteria for the Protection of Aquatic Life, Volume III* (1987, updated September 30, 1989 and November 8, 2006). Voucher specimens will be collected as described in section (14). Stream flow will be measured with a Marsh-McBirney FloMate Model 2000 Portable Flow Meter when the HD samplers are installed and retrieved.

Contingent on weather and stream conditions, as well as availability of NEORSD personnel, field collections for fish will be attempted at as many of the locations as possible. The potential locations are listed in the tables in section 5. Sampling will be conducted using longline electrofishing techniques and will consist of

shocking all habitat types within a sampling zone, while moving from downstream to upstream. The sampling zone for headwater sites (Big Creek sites #28.1 and #26, Doan Brook sites #19.5, #18.1, and #16.1, and Mill Creek sites #34.6 and #31) will be 0.15 km long. The sampling zone for wading sites (Big Creek site #25 and Euclid Creek sites #1.65, #1.5, and #0.5) will be 0.2 km long. The stunned fish will be collected and placed into a live well for later identification.

If surveys are conducted, fish will be identified to species level, weighed (where applicable), counted, and examined for the presence of external anomalies including DELTs. Fish easily identified (those commonly collected by NEORSD from year to year) will be returned to the site from which they are collected. Subsamples of difficult to identify species will be brought back to the laboratory for verification by NEORSD personnel and, if necessary, sent to The Ohio State University College Museum of Biological Diversity for verification by the Curator and/or Associate Curator of Fish. Voucher specimens will be collected as described in section (14). Endangered species and those too large for preservation will not be collected as voucher specimens, but will instead be photographed. Photographed vouchers will include features that permit definitive identification of the particular species.

Fish will be preserved in 10 percent formalin in the field, soaked in tap water for 24 to 48 hours after 5 to 7 days, then transferred to solutions of 30 and 50 percent ethanol for 5 to 7 days each and, finally, to 70 percent ethanol for long-term storage. Specimens larger than six inches will be slit along the right side and then soaked in formalin for approximately 10 to 14 days before being transferred to water and solutions of 30, 50 and 70 percent ethanol. Label information will include location (description and coordinates), date, time, collectors' names and sample identification code for each specimen collected.

A detailed description of the sampling and analysis methods utilized in the macroinvertebrate and fish surveys, including calculations of the ICI, IBI, and MIwb can be found in Ohio EPA's *Biological Criteria for the Protection of Aquatic Life, Volumes II* (1987, updated January 1, 1988 and November 8, 2006) and *III* (1987, updated September 30, 1989 and November 8, 2006).

Water chemistry sampling and chemical analyses will follow the *Manual of Ohio EPA Surveillance Methods and Quality Assurance Practices* (2006). One 4-liter disposable polyethylene cubitainer with disposable polypropylene lid and two 473 mL plastic bottles will be used to collect a surface grab sample at each location. One duplicate sample and one field blank will be collected at a randomly selected site for each round of sampling. The acceptable relative percent difference for field duplicate samples will be ≤ 30 percent; results outside this range will trigger further evaluation and investigation into causes for disparities. Acid preservation

Benthic Macroinvertebrate Sampling Upstream of NEORSD CSO Areas Study Plan
February 5, 2008 Amended April 22, 2008

of the samples, as specified in the NEORSD laboratory's standard operating procedure for each parameter, will occur in the field. Appendix B lists the analytical method and detection limits for each parameter analyzed. Field analyses include the use of a Marsh-McBirney FloMate Model 2000 Portable Flow Meter, which measures flow in feet per second, and a YSI-556 MPS Multi-Parameter Water Quality Meter to measure dissolved oxygen, water temperature, specific conductivity and pH at the time of sampling. Meter specifications have been included in Appendix B.

The QHEI, as described in Ohio EPA's, *Methods for Assessing Habitat in Flowing Waters: Using the Qualitative Habitat Evaluation Index (QHEI)* (2006) will be used to assess aquatic habitat conditions at each sample location.

(5) Sampling Locations

| Site Location | Latitude | Longitude | River Mile | Description | Quadrangle | Purpose |
|---------------------------------|-----------|-----------|------------|-------------------------------|----------------|--|
| Big Creek #26 | N41.4460° | W81.7540° | 4.40 | Memphis MetroPark | Lakewood | Evaluate macroinvertebrates and habitat upstream of CSOs |
| Big Creek-Ford Branch #28.1 | N41.4230° | W81.8019° | 4.70 | West 150 th Street | Lakewood | Evaluate macroinvertebrates and habitat upstream of CSOs |
| Doan Brook-North Branch #18.1 | N41.4838° | W81.5643° | 6.70 | Upstream of Lee Road | Shaker Heights | Evaluate macroinvertebrates and habitat upstream of CSOs |
| Doan Brook-South Branch #19.5 | N41.4739° | W81.5593° | 1.40 | US Attleboro Road | Shaker Heights | Evaluate macroinvertebrates and habitat upstream of CSOs |
| Euclid Creek #1.5 | N41.5658° | W81.5358° | 2.70 | Upstream of Highland Road | East Cleveland | Evaluate macroinvertebrates and habitat upstream of CSOs |
| Euclid Creek #1.65 ¹ | N41.5738° | W81.5470° | 1.65 | Upstream of St. Clair Avenue | East Cleveland | Evaluate macroinvertebrates and habitat upstream of CSOs |
| Mill Creek #34.6 | N41.4305° | W81.5442° | 8.30 | Upstream of South Miles Road | Shaker Heights | Evaluate macroinvertebrates and habitat upstream of CSOs |

¹ Euclid Creek RM 1.65 was added because it is immediately upstream of all NEORSD CSO's, whereas, RM 2.70 is upstream from other non-NEORSD point sources. This location will allow NEORSD to evaluate impacts on the aquatic community from other non-NEORSD point sources located upstream.

Benthic Macroinvertebrate Sampling Upstream of NEORSD CSO Areas Study Plan
February 5, 2008 Amended April 22, 2008

Downstream of CSO Permit-Required Sampling Locations*

| Site Location | Latitude | Longitude | River Mile | Description | Quadrangle | Purpose |
|-------------------|-----------|-----------|------------|--------------------------------|-----------------|---------------------------------|
| Big Creek #25 | N41.4460° | W81.6865° | 0.15 | Downstream of Jennings Road | Cleveland South | Ohio EPA Permit No. 3PA00002*FD |
| Doan Brook #16.1 | N41.5330° | W81.6296° | 0.75 | Downstream of St. Clair Avenue | Cleveland North | Ohio EPA Permit No. 3PA00002*FD |
| Euclid Creek #0.5 | N41.5833° | W81.5594° | 0.55 | Downstream of Lakeshore Avenue | East Cleveland | Ohio EPA Permit No. 3PA00002*FD |
| Mill Creek #31 | N41.4178° | W81.6387° | 0.12 | Upstream of Canal Road | Cleveland South | Ohio EPA Permit No. 3PA00002*FD |

* These locations will be sampled according to Ohio EPA Permit No. 3PA00002*FD and are included here for comparison purposes only.

The purpose of sampling at each location is to compare the macroinvertebrate communities and water quality data from the upstream sampling sites to those from the respective sampling sites located downstream from areas of NEORSD-owned CSOs. Data generated will be used to evaluate the extent to which NEORSD CSOs or other environmental factors may be impacting the downstream macroinvertebrate community. Comparisons between water quality and biological community health will only be made if at least three water quality samples have been collected from that site.

(6) Schedule

The first round of artificial substrate samplers will be installed on these streams at all of the sites in June 2008 and retrieved six weeks later. The second round of artificial substrate samplers will be installed on these streams at all of the sites approximately in August 2008 and retrieved six weeks later. Specific dates have not been scheduled. River flow and weather conditions will be assessed weekly to determine when the HD sampler installations and retrievals will be conducted.

Ohio EPA Macroinvertebrate Field Sheets will be completed during the retrieval of each HD sampler.

If possible, one to two electrofishing surveys will be conducted between June 15 and October 15, 2008. Each survey would be conducted at least four to five weeks apart. Specific dates have not been scheduled. Stream and weather conditions, as well as, availability of NEORSD personnel will be assessed weekly to determine when each electrofishing pass will be conducted.

Water samples will be collected approximately every eight days throughout each macroinvertebrate colonization period, unless surface water conditions are deemed unsafe.

Habitat evaluations will be conducted one time at each location between June 15 and September 30, 2008.

(7) QA/QC

Quality assurance and quality control of sampling and analysis methods for habitat, fish, and macroinvertebrate evaluations will follow Ohio EPA's *Biological Criteria for the Protection of Aquatic Life, Volumes II* (1987, updated January 1, 1988 and November 8, 2006) and *III* (1987, updated September 30, 1989 and November 8, 2006) and *Methods for Assessing Habitat in Flowing Waters: Using the Qualitative Habitat Evaluation Index (QHEI)* (2006).

Macroinvertebrate community assemblages will be collected and shipped to EA Engineering, Science and Technology for identification and enumeration except for those that may be identified by Tiffany Moore of NEORSD. EA Engineering, Science and Technology will identify specimens to the lowest practical taxonomic level and when the condition of the specimen allows, to the level of taxonomy recommended in Ohio EPA's *Biological Criteria for the Protection of Aquatic Life, Volume III* (1987, updated September 30, 1989 and November 8, 2006). The EA Engineering, Science and Technology QA/QC manual is attached (Appendix C). All macroinvertebrate specimens will be returned to NEORSD by EA Engineering, Science and Technology. Voucher specimens for each site will be separated into individual vials and collected as described in section (14). The remaining specimens for each site will be returned in a single container labeled with the site number and method and date of collection. All specimens and accompanying chain-of-custody documentation will be retained by NEORSD and stored at the Environmental & Maintenance Services Center (EMSC) for a period not less than ten years.

Electrofishing equipment will be used according to the guidelines listed in the operation and maintenance manual provided by Smith-Root, Inc. Malfunctioning equipment will not be used to conduct surveys. Proper steps will be taken to correct the problem as soon as possible, whether by repairing in the field or at the NEORSD EMSC or by contacting the supplier or an appropriate service company.

Subsamples of difficult to identify fish species will be brought back to the laboratory for verification by NEORSD personnel, and if necessary sent to The Ohio State University College Museum of Biological Diversity for verification by the Curator and/or Associate Curator of Fish. Voucher specimens will be collected as described in section (14). Endangered species and those too large for preservation will not be collected as voucher specimens, but will instead be photographed. Photographed vouchers will include features that will permit definitive identification of the particular species.

Benthic Macroinvertebrate Sampling Upstream of NEORSD CSO Areas Study Plan
February 5, 2008 *Amended April 22, 2008*

Water samples obtained for chemical analyses will be collected, labeled and then placed on ice inside the field truck. The field truck will remain locked when not occupied/visible. Sampling activities, including sample time and condition of surface water sampled, will be entered in a QDC log book and on the water quality observation checklist. The samples will then be delivered immediately to the NEORSD Analytical Services cooler, after which the door to the cooler will be locked and the samples will be transferred to the custody of Analytical Services. The NEORSD Analytical Services Quality Manual and associated Standard Operating Procedures is on file with Ohio EPA. The Quality Assurance Officer at Analytical Service will send updates, revisions and any information on document control to Ohio EPA as needed.

Benthic Macroinvertebrate Sampling Upstream of NEORSD CSO Areas Study Plan
February 5, 2008 Amended April 22, 2008

(8) Work Products

Within one year of completion of the project, fish data (species, numbers, weights, pollution tolerances, the incidence of DELT anomalies, IBI and MIwb scores), macroinvertebrate data (types and numbers of macroinvertebrates collected and ICI scores), habitat data (QHEI raw data and scores) and water chemistry results will be submitted to the Ohio EPA. Additionally, reports summarizing, interpreting, graphically presenting and discussing the IBI, MIwb, ICI and QHEI scores and any excursions from water quality standards will be prepared for internal use.

(9) Qualified Data Collectors

The following Level 3 Qualified Data Collectors (QDC) will be involved with this study:

| Name | Address | Email Address | Phone Number | QDC Specialty(s) |
|--|--|---|--------------|---------------------------|
| ¹ John W. Rhoades | 4747 East 49 th Street Cuyahoga Hts., Ohio 44125 | rhoadesj@neorsd.org | 216-641-6000 | QDC - 008 CWQA/FCB/SHA |
| Cathy Zamborsky | 4747 East 49 th Street Cuyahoga Hts., Ohio 44125 | zamborskyc@neorsd.org | 216-641-6000 | QDC - 009 CWQA/SHA |
| Seth Hothem | 4747 East 49 th Street Cuyahoga Hts., Ohio 44125 | hothems@neorsd.org | 216-641-6000 | QDC - 010 CWQA/FCB/SHA |
| Kathryn Crestani | 4747 East 49 th Street Cuyahoga Hts., Ohio 44125 | crestanik@neorsd.org | 216-641-6000 | QDC - 011 CWQA/SHA |
| ^{3,4} Tiffany Moore | 4747 East 49 th Street Cuyahoga Hts., Ohio 44125 | mooret@neorsd.org | 216-641-6000 | QDC - 017 CWQA/BMB/SHA |
| ^{2,5} Tom Zabloutny | 4747 East 49 th Street Cuyahoga Hts., Ohio 44125 | zabloutnyt@neorsd.org | 216-641-6000 | QDC - 018 CWQA/FCB/SHA |
| ⁶ Ron Maichle | 4747 East 49 th Street Cuyahoga Hts., Ohio 44125 | maichler@neorsd.org | 216-641-6000 | QDC - 145 CWQA |
| ⁴ Marty Sneen | EA Engineering, Science and Technology 444 Lake Cook Road, Suite #18 Deerfield, IL 60015 | msneen@eaest.com | 847-945-8010 | QDC - 026 BMB |
| ¹ Lead Project Manager | | ⁴ Project Manager Benthic Macroinvertebrate Identification | | |
| ² Stream Habitat Assessment (SHA) | | ⁵ Fish Community Biology (FCB) | | |
| ³ Benthic Macroinvertebrate Biology (BMB) Project Manager | | ⁶ Chemical Water Quality Assessment (CWQA) Project Manager | | |

The following is a list of persons not qualified as a QDC who may be involved in the project. Prior to the start of sampling, the project managers will explain to each of these and any other individuals the proper methods for macroinvertebrate, electrofishing and water quality sample collections. Sampling will only be completed under the direct observation of a QDC. The lead project manager will be responsible for reviewing all reports and data analysis prepared by qualified personnel prior to completion.

(12) ODNR collectors' permit

To be submitted electronically when issued to NEORSD by ODNR.

(13) Catalog Statement

A digital photo catalog of all sampling locations will be maintained for 10 years and will include photos of the specific sampling location(s), the riparian zone adjacent to the sampling location(s) and the general land use in the immediate vicinity of the sampling location(s).

Print/Signature: John W. Rhoades / Date: _____

(14) Voucher Specimen Statement

Based on Ohio EPA's Final Responsiveness Summary of the Credible Data Rules (3/24/06), NEORSD is requesting approval of an alternative vouchering protocol, as follows:

NEORSD will maintain a benthic macroinvertebrate or fish voucher collection which includes two specimens of each species or taxa collected during the course of biological sampling from any stream within the NEORSD's service area. When benthic macroinvertebrate specimens from other surface waters are collected within the same year and identified by the same QDC, one voucher collection will be created to represent the specimens collected from those streams. When fish specimens from multiple surface waters are collected within the same year, a single voucher collection will be created to represent the specimens collected from those streams. A separate collection for each sampling event will not be maintained.

NEORSD will provide specimen vouchers to the Director upon request. This collection will be stored at the NEORSD laboratory in the Environmental and Maintenance Services Center.

Print/Signature: John W. Rhoades / Date: _____

Standard Operating Procedures

Laboratory Processing of Benthic Samples

Upon arrival at the laboratory, the Hester-Dendy (H-D), Surber, and qualitative samples were logged in and accounted for. Prior to sorting and identification, each sample was rinsed on a No. 60 (0.250 mm openings) U.S. Standard Testing Sieve to remove the preservative and the H-D plates were scraped to remove the organisms. Sorting of each H-D and Surber sample was conducted in a white enamel pan first under a magnifier lamp and finally under a compound dissecting scope. If necessary, a Folsom sample splitter was used to subsample the H-Ds and Surbers until a more manageable number of organisms was achieved. Prior to splitting, the sample was pre-picked to remove any large and/or rare taxa. In all a minimum of 250 organisms in representative proportions were removed from the fractionated samples. Organisms were sorted to higher taxonomic levels (generally Class or Order level) and preserved separately in labeled vials containing 70% ethyl alcohol. To assure a consistent level of quality and sorting efficiency, senior EA personnel checked all samples. The qualitative samples contained very little detrital matter and therefore were simply rinsed prior to identification.

Macroinvertebrate identifications were made to the lowest practical taxonomic level using the most current literature available (see attached list of taxonomic literature). Whenever possible, the level of identifications followed those recommended by Mr. Jeffery DeShon of the Ohio EPA (pers. comm., 1998). Chironomidae larvae were cleared in warm 10% potassium hydroxide and mounted in CMC-10 prior to identification. Generally, 100 chironomids from any single sample were mounted for identification. For all sample types, specimens were enumerated, coded and recorded on a standard laboratory bench sheet for data processing.

Data Analyses

The Invertebrate Community Index (ICI) was used as the principal measure of overall macroinvertebrate community condition. Developed by the Ohio EPA, the ICI is a modification of the Index of Biotic Integrity for fish (Ohio EPA 1987). The ICI consists of ten individually scored structural community metrics:

1. Total number of taxa
2. Total number of mayfly taxa
3. Total number of caddisfly taxa
4. Total number of dipteran taxa
5. Percent mayflies
6. Percent caddisflies
7. Percent Tanytarsini midges
8. Percent other dipterans and non-insects
9. Percent tolerant organisms
10. Total number of qualitative EPT taxa.

Scoring criteria for all ten metrics is dependent upon drainage area. The scoring of an individual sample was based on the relevant attributes of that sample compared to equivalent data from 232 reference sites throughout Ohio. Metric scores range from six points for values comparable to exceptional community structure to zero points for values that deviate strongly from the expected range of values based on scoring criteria established by Ohio EPA (1989a). The sum of the individual metric scores resulted in the ICI score for that particular location.

Calculation of the ICI was conducted using a computer program written for the software SAS® by EA in 1994. This program is continuously tested and updated to ensure its accuracy. Although the ICI is most often used to analyze the combination of H-D and qualitative data from a particular location, for this study, the ICI was also calculated for the combination of Surber and qualitative data when H-D data were not available.

The only other statistical comparison used was the relative abundance (or percent composition) of individual taxa from each site and sample type. Relative abundance was calculated for both sample types as:

$$\text{Rel. Abund.(\%)} = 100 \times \frac{\text{\# Individuals of a Taxa}}{\text{Total \# of Individuals in Sample}}$$

All sample processing and data analysis were completed by permanent and full-time EA Engineering, Science, & Technology, Inc. staff working our Deerfield, Illinois office and laboratory. Specific staff members that worked on this project and relevant experience are listed below by task:

| <u>Task</u> | <u>EA Personnel</u> | <u>Years of Experience</u> |
|---------------------|---------------------|----------------------------|
| Login | Sarah Olson | 1.5 |
| Sorting | Nick Wood | 1 |
| Chironimid Mounting | Paul Hauser | 2 |
| | Sarah Olsen | 1.5 |
| Identification | Marty Sneen | 17 |
| Data Analysis | Matt Poore | 1 |
| | Joe Vondruska | 22 |
| | Marty Sneen | 17 |

Selected Ohio EPA Reporting Requirements

Item 12-Taxonomic literature

Although EA's taxonomic library contains substantially more references than are listed here, the following list only includes taxonomic literature used to identify the benthos in samples from Big Creek, Doan Brook, Euclid Creek, and Mill Creek.

Wiggins, G.B. 1996. Larvae of the North American caddisfly genera (Trichoptera). 2nd edition. University of Toronto Press, Toronto, Canada.

Item 13-Reference Collection

A reference collection was not necessary for identification of these specimens. However, if a reference collection had been needed to verify any specimens, EA maintains a sizable macroinvertebrate voucher collection with over 1800 specimens representing over 700 taxa. If this taxonomic library proved to be insufficient, every reasonable attempt would be made to have the specimen(s) identified or verified by a noted authority.

Item 16-Chironomidae Identification

Chironomidae larvae were cleared in warm 10% potassium hydroxide and mounted in CMC-10 prior to identification. Generally, 100 chironomids from any single sample are mounted for identification. Species level identifications generally follow those suggested by Ohio EPA.

Item 17-Copies of Raw Data

Copies of the laboratory bench sheets are appended to the hard copy of this document.

Item 18-ICI Calculation

The Invertebrate Community Index (ICI) was used as the principal measure of overall macroinvertebrate community condition. Developed by the Ohio EPA, the ICI is a modification of the Index of Biotic Integrity for fish (Ohio EPA 1987). The ICI consists of ten individually scored structural community metrics:

1. Total number of taxa
2. Total number of mayfly taxa
3. Total number of caddisfly taxa
4. Total number of dipteran taxa
5. Percent mayflies
6. Percent caddisflies
7. Percent Tanytarsini midges
8. Percent other dipterans and non-insects
9. Percent tolerant organisms
10. Total number of qualitative EPT taxa.

Scoring criteria for all ten metrics is dependent upon drainage area. The scoring of an individual sample was based on the relevant attributes of that sample compared to equivalent data from at least 232 reference sites throughout Ohio. Metric scores range from six points for values comparable to exceptional community structure to zero points for values that deviate strongly from the expected range of values based on scoring criteria established by Ohio EPA (1989a). The sum of the individual metric scores resulted in the ICI score for that particular location.

Calculation of the ICI was conducted using a computer program written for the software SAS® by EA in 1994. This program is continuously tested and updated to ensure its accuracy.

Item 20-Statistical Analyses

The only other statistical comparison used was the relative abundance (or percent composition) of individual taxa per site and sample type. Relative abundance was calculated for both sample types as:

$$\text{Rel. Abund.} = \frac{\text{\# Individuals of a Taxa}}{\text{Total \# of Individuals in Sample}}$$

Item 21-Results

Complete results are appended to the hard copy of this document.

Item 25-Electronically Formatted Data

For convenience, the data and text are provided in electronic format as Word 2003® files via email and on the enclosed CD-RW.

DIVISION OF WILDLIFE

Ohio Department of Natural Resources

Division of Wildlife Headquarters
2045 Morse Road, Bldg. G
Columbus, Ohio 43229-6693
1-800-WILDLIFE

RECEIVED
Water Quality & Industrial Surveillance
MAY 02 2007
STEVEN A GRAY
Chief, Division of Wildlife

DATE ISSUED
4/27/2007

WILD ANIMAL PERMIT: 156
SCIENTIFIC COLLECTION

JOHN W. RHOADES
4747 EAST 49TH ST.
CUYAHOGA HTS., OH 44125-1011

Chief, Division of Wildlife

Others authorized on permit

YES (SEE ATTACHMENT)

SOCIAL SECURITY NUMBER:

is hereby granted permission to take, possess, and transport at any time and in any manner specimens of wild animals, subject to the conditions and restrictions listed below or any documents accompanying this permit.

This permit, unless revoked earlier by the Chief, Division of Wildlife, is effective
from: 3/16/2007 to: 3/15/2008

This permit must be carried while collecting wild animals and be exhibited to any person on demand.

THIS PERMIT IS RESTRICTED TO THE FOLLOWING:

A. Specific Restrictions:

1. Permittee may collect fish and aquatic macro-invertebrates for survey and inventory purposes. All endangered species are to be release a site of capture.
2. Permittee must consult with Wildlife's Stream Conservation and Environmental Assessment Unit (SCEA) prior to conducting any wild animal work associated with compliance requirements of the Clean Water Act (CWA) Section 401 and/or 404. Contact the unit at 614/265-6308 (Bob Fletcher) or 614/265-6631 (Becky Jenkins).
3. 24 hours prior to setting trap nets or gillnets, contact must be made with the local wildlife officer or nearest district office to advise location and duration of sampling. All vouchers are to be deposited at NEORS.
4. Collection is prohibited in Big Darby, Little Darby, Chagrin river and Fish Creek (Williams County) without explicit written permission from the Division of Wildlife.
5. Permittee must provide an annual report of collecting activities to the Division of Wildlife. Report shall provide species, quantity and locations of collection.

B. Locations of Collecting:

STATEWIDE

C. Equipment and method used in collection:

SEINES, TRAP NETS AND ELECTROSHOCKER.

D. Name and number of each species to be collected:

FISH AND MACROINVERTEBRATES AS REQUIRED. ALL FISH (EXCEPT VOUCHER SPECIES) MUST BE RELEASED AT THE COLLECTION SITE.

G. An annual report detailing the date(s), location(s), quantities and species collected must be submitted to the Division of Wildlife by the following February 1st from issued date above.

This permit is not valid for collecting migratory birds, their nests, or eggs unless a current permit from the U.S. Fish and Wildlife Service has been obtained.

F. Additional restrictive documents accompanying this permit?

G. NO ENDANGERED SPECIES MAY BE TAKEN WITHOUT WRITTEN PERMISSION FROM THE CHIEF

ATTACHMENT

This attachment to Scientific Collecting Permit # 156 authorizes the following persons to conduct the activities listed on the permit, within the conditions and restrictions set forth. Each person must carry and exhibit upon request, a copy of the permit and this attachment when conducting any of the listed activities. The person named on the permit assumes full responsibility for the actions of the persons on this list and for completing and submitting all required reports.
